

YOUNG LARA CROFT VIGNETTE INSTRUCTIONS

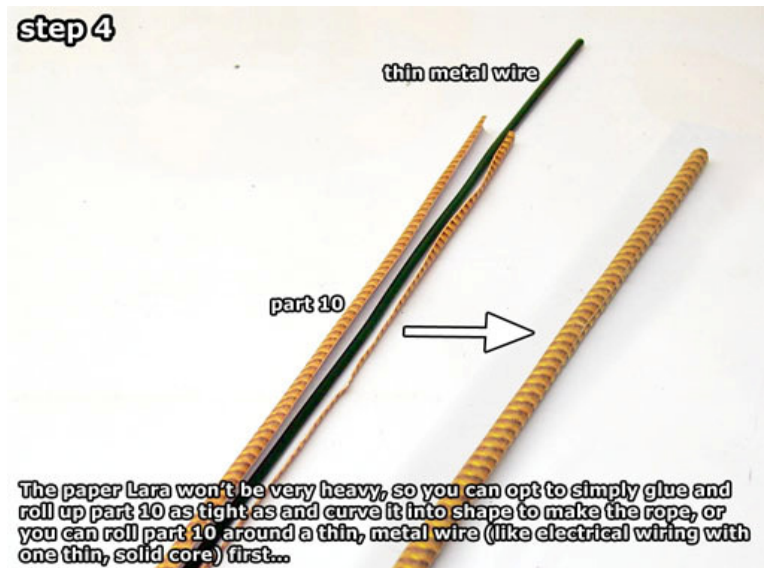

step 3

Then glue the two halves together like so.

step 4

The paper Lara won't be very heavy, so you can opt to simply glue and roll up part 10 as tight as and curve it into shape to make the rope, or you can roll part 10 around a thin, metal wire (like electrical wiring with one thin, solid core) first...

step 5

Gently curve the "rope" to make it appear as if it's swinging, and then attach it through the hole on top of the stand.

step 6

Once you're sure the "rope" won't come loose anymore, close the top of the stand with part 11.

step 7

Then cut out and assemble parts 12-20, and glue them on top of the bottom piece as shown here.

step 8

Now you can have young Lara hold the rope like so. If her grasp isn't strong enough, you can add some glue to her hands.

Thank you for building a Ninjatoes' papercraft model!
